SUMMARY

AI Specialist and Senior Data Engineer with a strong background in software engineering, focusing on data science solutions and backend development. Expertise in Python and Java programming, with a proven ability to implement complex systems independently. Skilled in fostering collaboration with clients and teams to deliver innovative solutions.

SKILLS

- python java linux git
- postgresql devops cloud
- data engineering
- backend development
- generative ai llms rag
- prompt engineering
- model fine-tuning mlops
- mlflow azure databricks
- azure sql cosmosdb
- docker kubernetes
- api integration
- data governance security
- compliance azure ai foundry
- azure ml power bi
- typescript aws

EXPERIENCE

- AI Specialist

2026-08 - Present

micro1

- Lead the development of Generative AI and LLM solutions, focusing on model alignment and fine-tuning.
 - Design and implement RAG systems and AI governance workflows using Azure technologies.
 - Benchmark AI code generation across multiple programming languages including Python and Java.
- Full-Stack Developer & DevOps Engineer

2025-01 - Present

ABZ Serviços

- Developed EmployeeHub, enhancing operational efficiency by 40% through automation.
 - Built data engineering pipelines integrating Azure services and established security compliance architecture.
- Python Developer & Spatial Data Engineer

2024-03 - 2025-03

BRTech3D

- Created high-performance data processing scripts for geospatial applications, significantly optimizing processing times.
 - Engineered scalable data storage solutions on Azure Data Lake and PostgreSQL.
- Topographical Survey Operator III (Laser Scanning)

2023-08 - 2024-03

Master Engineering Services

- Operated 3D laser scanning equipment for precise data collection in industrial environments.
- Topographical Survey Operator II

2022-12 - 2023-08

OfTech3D

- Executed field data collection and implemented QA processes for data integrity.
- Technical Documentation & Support Specialist

2021-03 - 2022-12

SmartStore / Jackkk Connection

- Produced technical manuals and provided support for complex business proposals.
- Training Specialist & Automation Technician

2017-05 - 2021-03

Jackkk Connection Comercial

- Coordinated training for professionals in industrial automation and developed educational simulations.

Technical Team Lead & Specialized Support

2016-08 - 2017-05

Diesel Line Cambuí

- Led teams in maintenance of large-scale engines and managed technical support for international clients.

Apprentice Technician

2015-10 - 2016-08

Diesel Line Cambuí

- Supported commercial processes and ensured compliance in system maintenance.

EDUCATION

UniFatecie

B.S. in Mechanical Engineering

ETP Escola Técnica Brasil

Technical Diploma in Industrial Automation

PROJECTS

Portal ABZ

Developed a corporate operations portal that streamlined internal communication and ensured compliance for ABZ Group. The portal features robust functionalities that enhance collaboration among teams, automate compliance tracking, and facilitate efficient information sharing, significantly improving operational workflows.

SGLang Commander

Developed a comprehensive management console for SGLang inference servers, incorporating advanced metrics and deployment functionalities. This console enables real-time monitoring and management of server performance, facilitating efficient resource allocation and deployment processes. By integrating detailed analytics, it enhances operational oversight and supports data-driven decision-making, significantly improving server management efficiency.

Ticket Manager

Developed an AI-driven support-ticket system that automates triaging and workflow management, significantly improving response times and operational efficiency. The system leverages machine learning algorithms to categorize incoming tickets, prioritize issues, and direct them to the appropriate teams, ensuring a streamlined resolution process. This innovative approach enhances user experience and optimizes resource allocation within support operations.
